

# Corrosion Services

We are a comprehensive provider of Cathodic Protection services. Including Design, Install, Repair, and Testing. Our systems are designed for minimal disruption to our customers business and to current NACE standards.

## Our services include:

- **Design**

- We have a corrosion specialist that can evaluate all site information and propose a repair or new installation. We provide design services on pipeline, underground storage tanks, above ground storage tanks, bridge, and utility infrastructure and much more.

- **Install**

- We install both Galvanic and Impressed current systems. Each system has its own unique pros and cons and we evaluate what design would be best for each site. We provide options for the owners based on what their overall goals are for the future of the property.

- **Repair**

- We are experts in solving complex corrosion problems. We trouble shoot your cathodic protection system and can pin point what is wrong with the system and provide an accurate cost to fix them. A lot of other companies do not have enough experience trouble shooting impressed current systems and as a result recommend installing a new system when it may not be necessary.

- **Testing**

- We provide cathodic protection testing and six month follow up surveys for all installs and repairs we complete. If you have other testing questions, or requirements please contact us for a quote.

Ask us about our **\*\*PRICE MATCH GUARANTEE\*\*** and **\*\*10-YR LIMITED WARRANTY\*\***
